NATURRESERVAT

GJESVÆRSTAPPAN

Gjesværstappen naturreservat ligger nesten på høyde med Nordkapp, utenfor fiskeværst Gjesvær. Reservatet dekker totalt 7,1 km² og er et av de største fuglefjellene i Norge. En rekke arter hekkar her, blant annet havsule, storskarv, alke, lomvi, lunde og krykkje.

Lundekolonien hekker på Strøstappen og Kristappen. Lundene hekker i gressbeiteene, i ur og i skrekker i fjellet. Med ungfugler og ikkehekkende individer er antallet godt over 1 million individer.

Lomvæn hekkar også i fupetjelist. Aftalet hekkende par har vært oppe i 650 par. Sammen med lomvæn hekket tidligere også adelen med noen få par. Disse er nå borte fra vort land, særmeynligvis fordi de ikke liker å hekke i høvnen så godt som det lomvæn gjør.

ending on 31.12.2004 and 2005 year) is provided.

Den mest stænde arven kom faktisk på Gyssevejstap-pen, et hærulde. Om lag 1.200 par hekker vest på Sjælland, hvor de samler sammen lærestykker, gem og taurester til rene sine. Arven stabiliserer sig he-1987, og stige mark i antallet. I 1995 var det over 500 par, og i 2002 over 2000 par.

Storakrøven skræmmes lett av reind og bruker en del tid før den kommer tilbake. Dette gjør egg og unger svært utsatt for reirplyndring fra måker og andre predatorer. Det bør derfor utvises hensyn ved ferdsel til sjøs og på land i nærheten av storakrøvikoloniane. I 2011 hekket det 931 par i reservatet.

Krykkje er en liten måkeart som finner føden sin i åpent hav. På 60- og 70-tallet ble bestanden anslått til ca. 1500 per, men dette tallet var gått ned til ca. 900 per i 2006. Krykkjesjåen er den største kolonien for tiden.

Havørn er en vanlig fugl på Gjesværetappen. Man kan se flere titalls i lufta samtidig. De fleste av disse er imidlertid ikkehekkende, unge fugler, som høster av den overfloden av fiskeboller. Kun et par er påvist hekkende, men kanskje per hekker på næring er inne på Kåfjordnes.

Ellers er havets og sjøes mange arter i reservatet. Den svarte telstenen møter de sorte beina fiskekommer. Toppakrøken kryper inn i alle mulige steder. Den mytiske havvalen kommer inn i fjellet på sein-smørren, og får kanskje vingene sine på vingene først med jul.

FORVALTNING OG OPPSYN

Forvaltningsmyndighet för reservatet är:
 Tyksmännens i Finnmark, Miljöverksamheten,
 9815 Vadsø. Telefon: 78 95 03 00.
 E-post: fmipostmottak@tyksmenn.no

Oppsyn: Statens naturskapsyn, Lakseelv
Telefon: 916 22 003/ 900 47 138

MANAGEMENT AND RANGERS

The reserve is managed by the Finnmark County Governor,
Department of Environmental Affairs, 9815 Vadsø.
Phone: 78 95 03 00. E-mail: fmilpostmottak@fylkesmannen.no

Rangers: Norwegian State Nature Inspectorate, Lakselv
Phone: 916 22 003/ 900 47 138

GJESVÆRSTAPPAN
NATURE RESERVE

Gjesværstappan Nature Reserve lies at almost the same height as Nordkapp, just outside the fishing village of Gjesvær. The reserve covers 7.1 square kilometers, and is one of the largest bird cliffs in Norway, and several species nest here. Among them are the gannet, cormorant, auk, murre, puffin and kittiwake.

The puffin colony nest at Storöppen and Kvitstappen. The puffins nest in the grass, among rocks and in cracks in the cliffs. When counting young birds and those who do not nest, there is often more than 1 million puffins in the area.

The murres also nests in the bird cliff. There has been up to 650 nesting pairs in the area. A few pairs of the thick-billed murres also used to nest here, but they have now vanished from the colony. This is probably because they are not as adept as the common murre at withstanding the sea ices in the area.

The auk looks a lot like the murre, but has a more pronounced beak. The auks nest in partial hiding among rocks on Storstappen and Kirkstappen, and this makes it difficult to calculate the number of auks in the area. A rough estimate is that there are more than 3500 nesting pairs in the reserve.

The most striking species nesting on Gjeve-slappen is the gannet. Approximately 1200 pairs nest at the western parts of Staurspiren, where they collect sea towels and pieces of rope for their nests.

RULES AND REGULATIONS

You are welcome to visit the protected area. Just remember: that all plants, together with all vegetation at land and in water, are considered to be part of the nature and should be treated as such.

Access codes that include the copyright year are not allowed to

- Destroy or damage plants and ground surface. New species must not be introduced.
- Use motorized vehicles on land.
- Camp, use tents or camouflage hides.
- Pollution and hunting is forbidden.

- **Play it safe!** by itself is the reserve, but avoid disturbance of the birds. Remember that nature is very vulnerable here to the north!
- **Off limits!** is prohibited at Skerpenheem from the 15th of June until the 15th of August.
- **Collect berries and mushrooms.**
- **Fish and hunt** according to current regulations. Remember that from March 1st until September 30th it is forbidden to kill, catch or hurt birds and mammals, and to use any traps.
- **Do not feed the birds!** Remember to collect eggs from nesting gull and do not shoot nestling gull.

We request visitors to the reserve to be courteous of guests and wildlife in the area, leave your animals leashed and do not litter.
